**EN 12600.** (Pendulum impact body test)

WFS-AS 75 : 2B2 certification

WFS-AS 100 : 2B2 certification

WFS-AS 175 : 1B1 certification

## **Advantages of the WFS films**

- **They protect people** against fragments of flying glass. MACtac Window Films hold shattered glass together avoiding razor sharp fragments flying into the room
- **The threat of severe injury is then significantly reduced** by simply and quickly applying MACtac films onto existing windows.
- **Almost Invisible !** The high gloss finish and perfectly clear adhesive make these WFS films almost invisible and do not alter the look of the protected glass doors, windows or graphics, even under extreme conditions
- **Protection against intrusion** : when the glass gets broken, MACtac films hold the shattered fragments together, slowing down attempts of entry by burglars .
- **Up to 99 % UV protection** - Ideal solution not only for shop window security but also to protect goods inside from sunlight damage
- **Anti-scratch treatment also protects our films** against vandalism or the use of abrasive materials
